

# Jett Plasma Lift MEDICAL

**Revolutionary medical device  
for use in non-ablative surgery.**

Jett Plasma Lift Medical is first patented direct current electrocautery in the world, made in the Czech Republic. Jett Plasma Lift Medical device uses new technology of treatment, based on electrical discharge - plasma (beam of electrons and ions). Plasma discharge is generated by safe high voltage between the tip of the device and grounded skin of patient. Due to its very thin discharge  $<0,1\text{mm}$  is possible to treat the eye area and perform non-invasive blepharoplasty.

CE 1023

Made in the Czech Republic

## Indications

*angioma senilis, verrucae seborrhoicae, verrucae planae, angiokeratoma, telangiectasie, lentigo, fibroma molle, keratoacanthoma, condylomata accuminatum, molluscum contagiosum, verrucae vulgares, verrucae filiformes, naevus capillaris, naevus araneus, basalioma superficiale, carcinoma spinocellularis, lymphangioma, keratosis actinica, keratosis senilis, keratosis seborrhoica, haemangioma, melasma, chloasma, cicatrix*

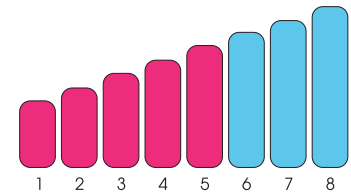

before

after 10 days

after 3 months

- Non-ablative treatments
- Fast healing process
- Long lasting effect
- No scars and keloids
- Unique technology of direct current

### 1 – 5 Cosmetic treatments

- lifting
- reduction of wrinkles
- restoration of connective tissues
- incorporation of active ingredients into deep skin layers
- improvement of elasticity

### 6 – 8 Medical treatments

### Suitable for

- Non-invasive blepharoplasty
- Removal of deep and shallow wrinkles
- Removal of warts, pigmentations, fibromas, couperosis, hemangiomas
- Scars correction
- Face and body lifting

### Designed for

- Non-invasive plastic surgery
- Dermatology
- Aesthetic medicine
- Otolaryngology
- Stomatology
- Gynecology
- Ophthalmology
- Proctology
- Urology
